Vorname, Name, Matrikelnummer 1. What is wrong with this code? public void Foo () } try { to substantial algeneine lock() // lock some resource // open some resource "Exception" dem sperieurese // try to change some things // fool around a bit Exception, Concurrent Modification Exception" groadclit catch (Exception e) { to Nach ersten Catal-Block catch (ConcurrentModificationException e) { spige Adronn in findly-System.out.println(,, bad stuff going on today!") BROCK finally { => Speziellere exception return; } kann nie gewatelt worden } 2. What will be the output of the program? public class TestException public static void badCall() System.out.print("throwing it "); throw new RuntimeException(); public static void main(String [] args) try { System.out.print("hello "); hello throwing it cought finally after badCall(); catch (Exception re) System.out.print("caught "); finally

System.out.print("finally ");

System.out.println("after ");

}

```
3. Output?
public class TestException1
          public static void main(String [] args)
             try
                                                  =D Programm strift ab

Grund: in Lad Mellad () wird

Error geschmissen

catch()-Block - catcht nur
               badMethod();
               System.out.print("A");
             catch (Exception ex)
               System.out.print("B");
             finally
                                                                       exceptions haine Errors
               System.out.print("C");
             System.out.print("D");
          public static void badMethod()
             throw new Error();
}
4. Make it compile!
public_class TestException2
          class TestException extends Exception {} // inner class
                public void runTest() throws TestException {}
                public void test() thous Test exception
                     runTest();
5. When should you re-throw a caught exception?
         - worn die Exception im catal-Block wilt
             betake nowgor hours
```

6. A banking software detects, that a certain customer ID is not in the database. Is this a) a system exception, b) a custom exception, c) no exception.

7. Was ist der Vorteil von Exceptions gegenüber dem Auswerten von Fehlerwerten im Return?

exceptions Limen will ignerient werden
